

CyberSource Secure Payment Acceptance: Oracle®

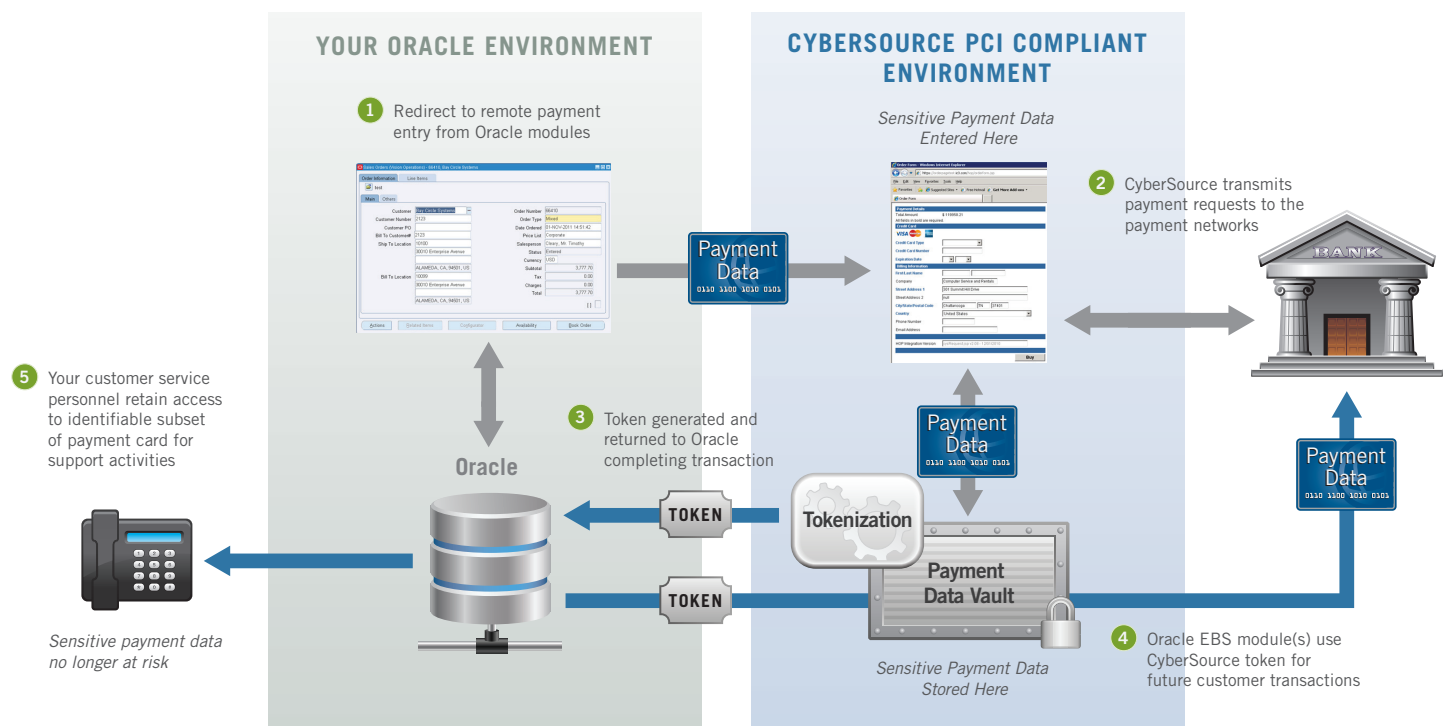

CyberSource®

Reduce Payment Data Storage Risk from Order-to-Cash

Oracle electronic payment acceptance fulfills a key function within your organization. However, storing sensitive payment data may expose your organization to significant security risks and increase your team's PCI Data Security Standard (PCI DSS) compliance workload. PCI DSS compliance is costly for your organization, consumes your team's resources, and *still* leaves you exposed to a payment data security breach. CyberSource offers a better way to secure payment acceptance while reducing your PCI DSS footprint.

CyberSource Secure Oracle Payment Acceptance

CyberSource Secure Oracle Payment Acceptance removes payment data from your Oracle EBS environment using hosted payment acceptance and tokenization. With sensitive payment data out of your environment, the Oracle application components are no longer part of your organization's PCI DSS scope.

How It Works

1. Users and customers enter sensitive payment data on a CyberSource payment page hosted within a PCI compliant data center
2. CyberSource transmits payment requests to the payment networks
3. CyberSource generates and returns a token, serving as a proxy for the payment card number
4. Oracle EBS modules utilize the token for future transactions
5. Customer service personnel retain access to identifiable subset of payment card for support activities

Implementation

CyberSource provides project managed delivery within your System Development Lifecycle (SDLC). CyberSource also recognizes the ongoing nature of your Oracle application SDLC, and structures delivery to minimize costs of future Oracle application release efforts.

We ensure that your staff is equipped to maintain CyberSource Secure Oracle Payment Acceptance within your future Oracle EBS releases.

Implementation options include:

- Oracle R11 and R12 modules & environments
- Customization options for international/multi-lingual Oracle E-Business Suite deployments
- Fixed price delivery approach
- Purchase Card Level II and Level III support

The CyberSource Advantage

Leverage the 'Payment Experts': CyberSource Payment Management Solutions can help optimize and improve your Order-to-Cash processes:

- Accept payment methods preferred in local markets, transact payments in over 190 countries, fund in 21 currencies
- Improve efficiencies and data reconciliation by connecting to multiple processors through a single connection
- Leverage value added services such as Account Updater, Fraud Management, Sales Tax Calculation, and more

Get Started

To reduce payment security risks and PCI compliance costs, contact your CyberSource sales representative, or call us directly at **1.888.330.2300** today.

Benefits

Improved Data Security

- Reduced PCI DSS scope
- Decreased potential for data loss in the event of security breach
- Increased IT project capacity for meeting core business needs

Improved Payment Reconciliation

- Easier transaction reconciliation from within your accounting system environment
- Improved receivables and cash flow
- Manual, error prone processes eliminated
